**KC Engineering Wins Bid on Ulster County Design-Build Project**

Circleville, NY, Sept. 21, 2016 – KC Engineering and Land Surveying, P.C. (KC), a leading engineering and land surveying firm, is pleased to announce that we have partnered with ECCO III Enterprises, Inc. (ECCO III) on a \$42.4 million design-build project consisting of two bridge replacements in Ulster County.

The New York State Department of Transportation has selected the ECCO III-KC Design-Build Team to design and replace the Route 209 bridge, located in the Town of Rochester, over Rochester Creek, and the Route 28 bridge, located in the Town of Shandaken, over Esopus Creek.

Both bridges will be planned and constructed to minimize future roadway flooding and bridge abutment scour, while also taking natural surroundings into consideration.

KC will spearhead the design of the bridges and approach roadways. KC's structural group provides structural engineering services for bridges, buildings, and other man-made structures from concept development to final design.

ECCO III is an experienced, solution-driven design-builder with expertise and proficiencies in bridge and highway construction, the design-build method, risk mitigation, and project-enhancing innovation.

The project is expected to be completed by the summer of 2018.
